Through the cooperation of the caring public, more than 1,700 injured or orphaned animals were brought to us in 2008. Our goal is to return healthy wildlife back to their habitats.

We are proud of our nearly 50% release rate, as injured or orphaned animals are often in shock, traumatized or severely injured when we receive them.

Our continuing research, pre-release conditioning and attention to detail help us become ever more successful in our release rates.
